**Intellectual Property Rights Notice for Open Specifications Documentation**

- **Technical Documentation.** Microsoft publishes Open Specifications documentation ("this documentation") for protocols, file formats, data portability, computer languages, and standards support. Additionally, overview documents cover inter-protocol relationships and interactions.

- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you can make copies of it in order to develop implementations of the technologies that are described in this documentation and can distribute portions of it in your implementations that use these technologies or in your documentation as necessary to properly document the implementation. You can also distribute in your implementation, with or without modification, any schemas, IDLs, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications documentation.

- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.

- **Patents.** Microsoft has patents that might cover your implementations of the technologies described in the Open Specifications documentation. Neither this notice nor Microsoft’s delivery of this documentation grants any licenses under those patents or any other Microsoft patents. However, a given Open Specifications document might be covered by the Microsoft Open Specifications Promise or the Microsoft Community Promise. If you would prefer a written license, or if the technologies described in this documentation are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.

- **License Programs.** To see all of the protocols in scope under a specific license program and the associated patents, visit the Patent Map.

- **Trademarks.** The names of companies and products contained in this documentation might be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit www.microsoft.com/trademarks.

- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events that are depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than as specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications documentation does not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments, you are free to take advantage of them. Certain Open Specifications documents are intended for use in conjunction with publicly available standards specifications and network programming art and, as such, assume that the reader either is familiar with the aforementioned material or has immediate access to it.

**Support.** For questions and support, please contact dochelp@microsoft.com.

### 1 Introduction

The PowerPoint Automation Services Conversion Web Service Protocol enables a protocol client to convert presentations from one file format to another.

Sections 1.5, 1.8, 1.9, 2, and 3 of this specification are normative. All other sections and examples in this specification are informative.

### 1.1 Glossary

This document uses the following terms:

- **certificate**: A certificate is a collection of attributes and extensions that can be stored persistently. The set of attributes in a certificate can vary depending on the intended usage of the certificate. A certificate securely binds a public key to the entity that holds the corresponding private key. A certificate is commonly used for authentication and secure exchange of information on open networks, such as the Internet, extranets, and intranets. Certificates are digitally signed by the issuing certification authority (CA) and can be issued for a user, a computer, or a service. The most widely accepted format for certificates is defined by the ITU-T X.509 version 3 international standards. For more information about attributes and extensions, see [RFC3280] and [X509] sections 7 and 8.

- **endpoint**: A communication port that is exposed by an application server for a specific shared service and to which messages can be addressed.

- **globally unique identifier (GUID)**: A term used interchangeably with universally unique identifier (UUID) in Microsoft protocol technical documents (TDs). Interchanging the usage of these terms does not imply or require a specific algorithm or mechanism to generate the value. Specifically, the use of this term does not imply or require that the algorithms described in [RFC4122] or [C706] must be used for generating the GUID. See also universally unique identifier (UUID).

- **Hypertext Transfer Protocol (HTTP)**: An application-level protocol for distributed, collaborative, hypermedia information systems (text, graphic images, sound, video, and other multimedia files) on the World Wide Web.

- **Hypertext Transfer Protocol Secure (HTTPS)**: An extension of HTTP that securely encrypts and decrypts web page requests. In some older protocols, "Hypertext Transfer Protocol over Secure Sockets Layer" is still used (Secure Sockets Layer has been deprecated). For more information, see [SSL3] and [RFC5246].

- **presentation**: A collection of slides that are intended to be viewed by an audience.

- **SOAP**: A lightweight protocol for exchanging structured information in a decentralized, distributed environment. SOAP uses XML technologies to define an extensible messaging framework, which provides a message construct that can be exchanged over a variety of underlying protocols. The framework has been designed to be independent of any particular programming model and other implementation-specific semantics. SOAP 1.2 supersedes SOAP 1.1. See [SOAP1.2-1/2003].

- **SOAP action**: The HTTP request header field used to indicate the intent of the SOAP request, using a URI value. See [SOAP1.1] section 6.1.1 for more information.

- **SOAP body**: A container for the payload data being delivered by a SOAP message to its recipient. See [SOAP1.2-1/2007] section 5.3 for more information.

- **SOAP fault**: A container for error and status information within a SOAP message. See [SOAP1.2-1/2007] section 5.4 for more information.
**SOAP header**: A mechanism for implementing extensions to a **SOAP message** in a decentralized manner without prior agreement between the communicating parties. See [SOAP1.2-1/2007] section 5.2 for more information.

**SOAP message**: An XML document consisting of a mandatory SOAP envelope, an optional **SOAP header**, and a mandatory **SOAP body**. See [SOAP1.2-1/2007] section 5 for more information.

**Uniform Resource Identifier (URI)**: A string that identifies a resource. The URI is an addressing mechanism defined in Internet Engineering Task Force (IETF) Uniform Resource Identifier (URI): Generic Syntax [RFC3986].

**Web Services Description Language (WSDL)**: An XML format for describing network services as a set of endpoints that operate on messages that contain either document-oriented or procedure-oriented information. The operations and messages are described abstractly and are bound to a concrete network protocol and message format in order to define an endpoint. Related concrete endpoints are combined into abstract endpoints, which describe a network service. WSDL is extensible, which allows the description of endpoints and their messages regardless of the message formats or network protocols that are used.

**WSDL message**: An abstract, typed definition of the data that is communicated during a **WSDL operation** [WSDL]. Also, an element that describes the data being exchanged between web service providers and clients.

**WSDL operation**: A single action or function of a web service. The execution of a WSDL operation typically requires the exchange of messages between the service requestor and the service provider.

**XML namespace**: A collection of names that is used to identify elements, types, and attributes in XML documents identified in a URI reference [RFC3986]. A combination of XML namespace and local name allows XML documents to use elements, types, and attributes that have the same names but come from different sources. For more information, see [XMLNS-2ED].

**XML namespace prefix**: An abbreviated form of an **XML namespace**, as described in [XML].

**XML schema**: A description of a type of XML document that is typically expressed in terms of constraints on the structure and content of documents of that type, in addition to the basic syntax constraints that are imposed by XML itself. An XML schema provides a view of a document type at a relatively high level of abstraction.

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT**: These terms (in all caps) are used as defined in [RFC2119]. All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

### 1.2 References

Links to a document in the Microsoft Open Specifications library point to the correct section in the most recently published version of the referenced document. However, because individual documents in the library are not updated at the same time, the section numbers in the documents may not match. You can confirm the correct section numbering by checking the **Errata**.

#### 1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

[MS-PPTX] Microsoft Corporation, "PowerPoint (.pptx) Extensions to the Office Open XML File Format".

1.2.2 Informative References

Note There is a charge to download this item.

1.3 **Overview**

This protocol allows a protocol client to convert a presentation from one file format to another file format. It allows the protocol client to pass a presentation file to the protocol server and to receive from the protocol server a converted file in a different format. A typical scenario for using this protocol is a file conversion application that enables users to convert presentation files to a different format for archiving purposes.

1.4 **Relationship to Other Protocols**

This protocol uses the SOAP message protocol for formatting request and response messages, as described in [SOAP1.1], [SOAP1.2-1/2007] and [SOAP1.2-2/2007]. This protocol uses SOAP over HTTP, as described in [RFC2616], and SOAP over HTTPS, as described in [RFC2818], as shown in the following layering diagram.

The following diagram shows the underlying messaging and transport stack used by the protocol:

![Diagram showing the layering of protocols](image)

**Figure 1: This protocol in relation to other protocols**

1.5 **Prerequisites/Preconditions**

This protocol operates against a protocol server that exposes one or more endpoint URIs that are known by protocol clients. The endpoint URI of the protocol server and the transport that is used by the protocol server are either known by the protocol client or obtained by using the discovery mechanism that is described in [MS-SPTWS].

The protocol client obtains the requisite ApplicationClassId and ApplicationVersion values and the endpoint URI of the protocol server that provides the discovery mechanism, as described in [MS-SPTWS], by means that are independent of either protocol.

This protocol requires the protocol client to have permission to call the methods on the protocol server.

The protocol client implements the token-based security mechanisms that are required by the protocol server and related security protocols, as described in [MS-SPSTWS].

1.6 **Applicability Statement**

This protocol is intended for use by protocol clients and protocol servers that are connected by high-bandwidth, low-latency network connections.
This protocol is designed for a protocol client to send a presentation file to a protocol server and get a converted file in a different format as response from the protocol server.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- **Supported Transports:** This protocol uses multiple transports with SOAP as described in section 2.1.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.
2 Messages

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be empty, null, or not present but the behavior of the protocol as specified restricts the same elements to being non-empty, not null, and present.

2.1 Transport

Protocol servers MUST support SOAP over HTTP or HTTPS. All protocol messages MUST be transported using HTTP bindings at the transport level.

Protocol messages MUST be formatted as specified in either [SOAP1.1] section 4 or [SOAP1.2-1/2007] section 5. Protocol server faults MUST be returned by using either HTTP status codes, as specified in [RFC2616] section 10, or SOAP faults, as specified in [SOAP1.1] section 4.4 or [SOAP1.2-1/2007] section 5.4.

If the HTTPS transport is used, a server certificate MUST be deployed.

This protocol does not define any means for activating a protocol server or protocol client. The protocol server MUST be configured and begin listening in an implementation-specific way. In addition, the protocol client MUST know the format and transport that is used by the protocol server; for example, the SOAP format over an HTTP transport.

2.2 Common Message Syntax

This section contains common definitions used by this protocol. The syntax of the definitions uses XML schema as defined in [XMLSCHEMA1] and [XMLSCHEMA2], and WSDL as defined in [WSDL].

2.2.1 Namespaces

This specification defines and references various XML namespaces using the mechanisms specified in [XMLNS]. Although this specification associates a specific XML namespace prefix for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

</tr>
</tbody>
</table>

This specification does not define any common WSDL message definitions.

#### StreamConversionRequest

The **StreamConversionRequest** message is a SOAP request message used to convert a presentation from one file format to another file format.

- The **SOAP body** MUST be the **StreamConversionRequest** element as specified by section 3.1.4.1.2.1.
- The **SOAP header** MUST include a FileExtension element of type xs:string ([XMLSCHEMA2] section 3.2.1) that specifies the extension of the input file.
- The SOAP header MUST include a Format element of type ViewFormat (section 2.2.5.6) that specifies the file format of the output of the conversion operation.
- The SOAP header MUST include an Id element of type guid (section 2.2.5.3) that specifies a unique identifier for the conversion operation.
- The SOAP header MUST include a Settings element of type ConversionSettings (section 2.2.4.1) that specifies the output settings for the conversion operation.

#### StreamConversionResponse

The **StreamConversionResponse** message is a SOAP response message used to convert a presentation from one file format to another file format.

- The **SOAP body** MUST be the **StreamConversionResponse** element as specified by section 3.1.4.1.2.2.
The **SOAP header** MUST include an `m_result` element of type `xs:int` ([XMLSCHEMA2] section 3.3.17) that specifies the result of the conversion. A value of zero indicates the operation was successful. All other values indicate the operation was not successful.

### 2.2.3 Elements

This specification does not define any common **XML schema** element definitions.

### 2.2.4 Complex Types

The following table summarizes the set of common **XML schema** complex type definitions defined by this specification. XML schema complex type definitions that are specific to a particular operation are described with the operation.

<table>
<thead>
<tr>
<th>Complex type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConversionSettings</td>
<td>A complex type that specifies output settings for a conversion operation. This type MUST NOT be used directly in an operation. Instead, an extension type MUST be used as specified by <code>FixedFormatSettings</code> (section 2.2.4.2), <code>PictureSettings</code> (section 2.2.4.3), or <code>PresentationSettings</code> (section 2.2.4.4).</td>
</tr>
<tr>
<td>FixedFormatSettings</td>
<td>A complex type that specifies output settings for a conversion operation that has a <code>ViewFormat</code> (section 2.2.5.6) value of <code>PptPdf</code> or <code>Xps</code>.</td>
</tr>
<tr>
<td>PictureSettings</td>
<td>A complex type that specifies output settings for a conversion operation that has a <code>ViewFormat</code> (section 2.2.5.6) value of <code>PowerpointStaticView</code>.</td>
</tr>
<tr>
<td>PresentationSettings</td>
<td>A complex type that specifies output settings for a conversion operation that has a <code>ViewFormat</code> (section 2.2.5.6) value of <code>Pptx</code>.</td>
</tr>
</tbody>
</table>

### 2.2.4.1 ConversionSettings

**Namespace:**

A complex type that specifies output settings for a conversion operation. This type MUST NOT be used directly in an operation. Instead, an extension type MUST be used as specified by `FixedFormatSettings` (section 2.2.4.2), `PictureSettings` (section 2.2.4.3), or `PresentationSettings` (section 2.2.4.4).

```xml
<xs:complexType name="ConversionSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:sequence/>
</xs:complexType>
```

### 2.2.4.2 FixedFormatSettings

**Namespace:**

A complex type that specifies output settings for a conversion operation that has a `ViewFormat` (section 2.2.5.6) value of `PptPdf` or `Xps`.

```xml
<xs:complexType name="FixedFormatSettings" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexContent mixed="false">
    <xs:extension base="tns1:ConversionSettings">
      <xs:sequence/>
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```
<xs:sequence>
  <xs:element minOccurs="0" name="BitmapUnembeddableFonts" type="xs:boolean"/>
  <xs:element minOccurs="0" name="FrameSlides" type="xs:boolean"/>
  <xs:element minOccurs="0" name="IncludeDocumentProperties" type="xs:boolean"/>
  <xs:element minOccurs="0" name="IncludeDocumentStructureTags" type="xs:boolean"/>
  <xs:element minOccurs="0" name="IncludeHiddenSlides" type="xs:boolean"/>
  <xs:element minOccurs="0" name="OptimizeForMinimumSize" type="xs:boolean"/>
  <xs:element minOccurs="0" name="UsePdfA" type="xs:boolean"/>
  <xs:element minOccurs="0" name="m_endSlide" type="xs:unsignedInt"/>
  <xs:element minOccurs="0" name="m_publishOption" type="tns1:PublishOption"/>
  <xs:element minOccurs="0" name="m_startSlide" type="xs:unsignedInt"/>
</xs:sequence>
</xs:extension>
</xs:complexContent>
</xs:complexType>

BitmapUnembeddableFonts: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether fonts that cannot be embedded in the output file are to be rasterized. True means fonts that cannot be embedded in the output file are rasterized.

FrameSlides: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether slides are to have a border. True means slides have a border.

IncludeDocumentProperties: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether document properties are to be included. True means document properties are included.

IncludeDocumentStructureTags: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether document structure tags are to be included. True means document structure tags are included.

IncludeHiddenSlides: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether hidden slides are to be included. True means hidden slides are included.

OptimizeForMinimumSize: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether the output is to be optimized for minimum size. True means the output is optimized for minimum size.

UsePdfA: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether the output file is to use the PDF/A format described in [ISO-19005-1]. True means the output file uses the PDF/A format described in [ISO-19005-1].

UseVerticalOrder: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether the output is to use vertical ordering. True means the output uses vertical ordering.

m_endSlide: An xs:unsignedInt ([XMLSCHEMA2] section 3.2.22) that specifies the last slide to be included in the output.

m_publishOption: A PublishOption (section 2.2.5.5) that specifies the view.

m_startSlide: An xs:unsignedInt ([XMLSCHEMA2] section 3.2.22) that specifies the first slide to be included in the output.

2.2.4.3 PictureSettings

Namespace:

A complex type that specifies output settings for a conversion operation that has a ViewFormat (section 2.2.5.6) value of PowerPointStaticView.
m_height: An xs:unsignedInt ([XMLSCHEMA2] section 3.3.22) that specifies the height of the image.

m_pictureFormat: A PictureFormat (section 2.2.5.4) that specifies the image format.

m_width: An xs:unsignedInt ([XMLSCHEMA2] section 3.3.22) that specifies the width of the image.

2.2.4.4 PresentationSettings

Namespace:

A complex type that specifies output settings for a conversion operation that has a ViewFormat (section 2.2.5.6) value of Pptx.

m_useStrict: An xs:boolean ([XMLSCHEMA2] section 3.2.2) that specifies whether the output file is to adhere to the Strict conformance class as specified by [ISO/IEC29500:2011]. True means the output file adheres to the Strict conformance class as specified by [ISO/IEC29500:2011].

2.2.5 Simple Types

The following table summarizes the set of common XML schema simple type definitions defined by this specification. XML schema simple type definitions that are specific to a particular operation are described with the operation.

<table>
<thead>
<tr>
<th>Simple type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>char</td>
<td>Reserved. The client and the server MUST NOT use this as the type of an element, and the client and the server MUST ignore it, if receiving an element of this type.</td>
</tr>
<tr>
<td>duration</td>
<td>Reserved. The client and the server MUST NOT use this as the type of an element, and the client and the server MUST ignore it, if receiving an element of this type.</td>
</tr>
<tr>
<td>guid</td>
<td>A string representing a GUID or unique identifier.</td>
</tr>
<tr>
<td>PictureFormat</td>
<td>A simple type that specifies an enumeration of image formats.</td>
</tr>
</tbody>
</table>
### Simple type | Description
---|---
**PublishOption** | A simple type that specifies a view used when converting presentations to PDF or XPS file formats.
**ViewFormat** | A simple type that specifies the file format of the output of a conversion operation.

#### 2.2.5.1 char
**Namespace:** http://schemas.microsoft.com/2003/10/Serialization/

Reserved. The client and the server MUST NOT use this as the type of an element, and the client and the server MUST ignore it, if receiving an element of this type.

```xml
<x:simpleType name="char" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:int"/>
</xs:simpleType>
```

#### 2.2.5.2 duration
**Namespace:** http://schemas.microsoft.com/2003/10/Serialization/

Reserved. The client and the server MUST NOT use this as the type of an element, and the client and the server MUST ignore it, if receiving an element of this type.

```xml
<x:simpleType name="duration" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:duration">
    <xs:pattern value="\-?P\(\d*\D\)?\(T\(\d*\H\)?\(\d*\M\)?\(\d*\S\)??\)/">
    <xs:minInclusive value="-P10675199DT2H48M5.4775808S"/>
    <xs:maxInclusive value="P10675199DT2H48M5.4775807S"/>
  </xs:restriction>
</xs:simpleType>
```

#### 2.2.5.3 guid
**Namespace:** http://schemas.microsoft.com/2003/10/Serialization/

A string representing a GUID or unique identifier.

```xml
<x:simpleType name="guid" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
  </xs:restriction>
</xs:simpleType>
```

#### 2.2.5.4 PictureFormat

A simple type that specifies an enumeration of image formats.

```xml
<x:simpleType name="PictureFormat" xmlns:xs="http://www.w3.org/2001/XMLSchema">
```

---
The following table specifies the allowable values for the `PictureFormat` simple type.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default</td>
<td>The default format.</td>
</tr>
<tr>
<td>Png</td>
<td>Portable Network Graphics Format [W3C-PNG].</td>
</tr>
<tr>
<td>Jpg</td>
<td>JPEG File Interchange Format [JFIF].</td>
</tr>
</tbody>
</table>

### 2.2.5.5 PublishOption

**Namespace:**

A simple type that specifies a view used when converting presentations to PDF or XPS file formats.

The following table specifies the allowable values for the `PublishOption` simple type.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default</td>
<td>The default option.</td>
</tr>
<tr>
<td>Slides</td>
<td>Slides view.</td>
</tr>
<tr>
<td>Outline</td>
<td>Outline view.</td>
</tr>
<tr>
<td>Handout1</td>
<td>Handout view with one slide per page.</td>
</tr>
<tr>
<td>Handout2</td>
<td>Handout view with two slides per page.</td>
</tr>
<tr>
<td>Handout3</td>
<td>Handout view with three slides per page.</td>
</tr>
<tr>
<td>Handout4</td>
<td>Handout view with four slides per page.</td>
</tr>
<tr>
<td>Handout6</td>
<td>Handout view with six slides per page.</td>
</tr>
<tr>
<td>Value</td>
<td>Meaning</td>
</tr>
<tr>
<td>-------------</td>
<td>--------------------------------------------</td>
</tr>
<tr>
<td>Handout9</td>
<td>Handout view with nine slides per page.</td>
</tr>
</tbody>
</table>

### 2.2.5.6 ViewFormat

**Namespace:**

A simple type that specifies the file format of the output of a conversion operation.

```xml
<xs:simpleType name="ViewFormat" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Invalid"/>
    <xs:enumeration value="Silverlight"/>
    <xs:enumeration value="Png"/>
    <xs:enumeration value="Pdf"/>
    <xs:enumeration value="Xps"/>
    <xs:enumeration value="Docx"/>
    <xs:enumeration value="Docm"/>
    <xs:enumeration value="Doc"/>
    <xs:enumeration value="Mht"/>
    <xs:enumeration value="Rtf"/>
    <xs:enumeration value="Xml"/>
    <xs:enumeration value="WordMobileImage"/>
    <xs:enumeration value="PowerpointSlideShow"/>
    <xs:enumeration value="PowerpointReadingView"/>
    <xs:enumeration value="PowerpointStaticView"/>
    <xs:enumeration value="Pptx"/>
    <xs:enumeration value="AccessiblePdf"/>
    <xs:enumeration value="AutoPrintPdf"/>
    <xs:enumeration value="PptAutoPrintPdf"/>
    <xs:enumeration value="Odt"/>
    <xs:enumeration value="WordEdit"/>
    <xs:enumeration value="PowerPointSmall"/>
    <xs:enumeration value="WordTeaser"/>
    <xs:enumeration value="MobileBrowserPng"/>
    <xs:enumeration value="PowerPointExtraSmall"/>
    <xs:enumeration value="PowerPointExtraLarge"/>
    <xs:enumeration value="PowerPointStaticLarge"/>
    <xs:enumeration value="PowerPointMedia"/>
    <xs:enumeration value="MontageView"/>
    <xs:enumeration value="PowerPointExtraExtraLarge"/>
    <xs:enumeration value="WordThumbnail"/>
    <xs:enumeration value="PowerPointStaticSmall"/>
    <xs:enumeration value="DocxStrict"/>
    <xs:enumeration value="Ppsx"/>
    <xs:enumeration value="Potx"/>
    <xs:enumeration value="PptxStrict"/>
    <xs:enumeration value="ReaderDocx"/>
    <xs:enumeration value="ReaderXml"/>
    <xs:enumeration value="PlaceholderDeprecatedPngSmall"/>
    <xs:enumeration value="PngLarge"/>
    <xs:enumeration value="PageMetadata"/>
    <xs:enumeration value="WordOoxml"/>
    <xs:enumeration value="Odp"/>
    <xs:enumeration value="Ocsb"/>
    <xs:enumeration value="VisioWebView"/>
    <xs:enumeration value="VisioWebT200"/>
    <xs:enumeration value="VisioWebT400"/>
    <xs:enumeration value="WordAcc"/>
    <xs:enumeration value="WordNamedActionAutoPrintPdf"/>
  </xs:restriction>
</xs:simpleType>
```
The following table specifies the allowable values for the **ViewFormat** simple type.

</table>
2.2.6 Attributes
This specification does not define any common XML schema attribute definitions.

2.2.7 Groups
This specification does not define any common XML schema group definitions.

2.2.8 Attribute Groups
This specification does not define any common XML schema attribute group definitions.
3 Protocol Details

In the following sections, the schema definition might differ from the processing rules imposed by the protocol. The WSDL in this specification matches the WSDL that shipped with the product and provides a base description of the schema. The text that introduces the WSDL might specify differences that reflect actual Microsoft product behavior. For example, the schema definition might allow for an element to be empty, null, or not present but the behavior of the protocol as specified restricts the same elements to being non-empty, not null, and present.

The client side of this protocol is simply a pass-through. That is, no additional timers or other state is required on the client side of this protocol. Calls that are made by the higher-layer protocol or application are passed directly to the transport, and the results that are returned by the transport are passed directly to the higher-layer protocol or application.

Except where specified, protocol clients SHOULD interpret Hypertext Transfer Protocol (HTTP) status codes that are returned by the protocol server as specified in [RFC2616], section 10.

This protocol allows protocol servers to notify protocol clients of application-level faults by using SOAP faults. Except where otherwise specified, these SOAP faults are not significant for interoperability and protocol clients can interpret them in an implementation-specific manner.

This protocol allows protocol servers to perform implementation-specific authorization checks and to notify protocol clients of authorization faults by using either HTTP status codes or SOAP faults, as specified previously in this section.

3.1 Server Details

The following diagram describes the communication between the protocol client and the protocol server.

![Diagram showing communication between protocol client and protocol server]

Figure 2: Sample communication between protocol client and protocol server

The protocol client sends the StreamConversionRequest SOAP message as specified in section 3.1.4.1.1.1 to convert a presentation. The protocol server responds with a StreamConversionResponse as specified in section 3.1.4.1.1.2, which contains the converted presentation.

3.1.1 Abstract Data Model

None.

3.1.2 Timers

None.
3.1.3 Initialization
None.

3.1.4 Message Processing Events and Sequencing Rules
The following table summarizes the list of operations as defined by this specification.

<table>
<thead>
<tr>
<th>Operation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Convert</td>
<td>The Convert operation is used to convert a presentation from one file format to another file format.</td>
</tr>
</tbody>
</table>

3.1.4.1 Convert
The Convert operation is used to convert a presentation from one file format to another file format.

The following is the WSDL port type specification of the Convert WSDL operation.

```xml
<wSDL:operation name="Convert" xmlns:wSDL="http://schemas.xmlsoap.org/wsdl/">
</wSDL:operation>
```

The protocol client sends a StreamConversionRequest request message, and the protocol server responds with a StreamConversionResponse response message.

3.1.4.1.1 Messages
The following table summarizes the set of WSDL message definitions that are specific to this operation.

<table>
<thead>
<tr>
<th>Message</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>StreamConversionRequest</td>
<td>The request WSDL message for the Convert WSDL operation.</td>
</tr>
<tr>
<td>StreamConversionResponse</td>
<td>The response WSDL message for the Convert WSDL operation.</td>
</tr>
</tbody>
</table>

3.1.4.1.1.1 StreamConversionRequest
The request WSDL message for the Convert WSDL operation.

The SOAP action value is:

```
http://tempuri.org/IConversionService/Convert
```

The SOAP body contains the StreamConversionRequest element.
3.1.4.1.2 StreamConversionResponse

The response WSDL message for the Convert WSDL operation.

The SOAP body contains the StreamConversionResponse element.

3.1.4.1.2 Elements

The following table summarizes the XML schema element definitions that are specific to this operation.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>StreamConversionRequest</td>
<td>The input data for the Convert WSDL operation.</td>
</tr>
<tr>
<td>StreamConversionResponse</td>
<td>The result data for the Convert WSDL operation.</td>
</tr>
</tbody>
</table>

3.1.4.1.2.1 StreamConversionRequest

The StreamConversionRequest element specifies the input data for the Convert WSDL operation.

```xml
<x:s:element name="StreamConversionRequest" xmlns:x="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:q1="http://schemas.microsoft.com/Message" name="InputData"
                   type="q1:StreamBody"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

InputData: A StreamBody (section 3.1.4.1.4.1) element that specifies the contents of the input presentation file.

3.1.4.1.2.2 StreamConversionResponse

The StreamConversionResponse element specifies the result data for the Convert WSDL operation.

```xml
<x:s:element name="StreamConversionResponse" xmlns:x="http://www.w3.org/2001/XMLSchema">
  <xs:complexType>
    <xs:sequence>
      <xs:element xmlns:q1="http://schemas.microsoft.com/Message" name="m_outputData"
                   type="q1:StreamBody"/>
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

m_outputData: A StreamBody (section 3.1.4.1.4.1) element that specifies the contents of the converted output file.

3.1.4.1.3 Complex Types

None.

3.1.4.1.4 Simple Types
The following table summarizes the XML schema simple type definitions that are specific to this operation.

<table>
<thead>
<tr>
<th>Simple type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>StreamBody</td>
<td>A stream of bytes.</td>
</tr>
</tbody>
</table>

### 3.1.4.1.4.1 StreamBody

**Namespace**: http://schemas.microsoft.com/Message

A simple type that specifies a stream of bytes.

```xml
<xs:simpleType name="StreamBody" xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:restriction base="xs:base64Binary"/>
</xs:simpleType>
```

### 3.1.4.1.5 Attributes

None.

### 3.1.4.1.6 Groups

None.

### 3.1.4.1.7 Attribute Groups

None.

### 3.1.5 Timer Events

None.

### 3.1.6 Other Local Events

None.

4 Protocol Examples

4.1 Convert a presentation to the PDF file format

This example demonstrates how a protocol client converts a presentation to the PDF file format.

The protocol client sends the following StreamConversionRequest message to the protocol server.

```
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
  <s:Header>
    <FileExtension>pptx</FileExtension>
    <Format>PptPdf</Format>
    <Id>936DA01F-9ABD-4d9d-80C7-02AF85C822A8</Id>
    <Settings>
      <a:BitmapUnembeddableFonts>true</a:BitmapUnembeddableFonts>
      <a:FrameSlides>true</a:FrameSlides>
      <a:IncludeComments>true</a:IncludeComments>
      <a:IncludeDocumentProperties>true</a:IncludeDocumentProperties>
      <a:IncludeDocumentStructureTags>true</a:IncludeDocumentStructureTags>
      <a:IncludeHiddenSlides>true</a:IncludeHiddenSlides>
      <a:OptimizeForMinimumSize>false</a:OptimizeForMinimumSize>
      <a:UsePdfA>false</a:UsePdfA>
      <a:UseVerticalOrder>false</a:UseVerticalOrder>
      <a:m_endSlide>0</a:m_endSlide>
      <a:m_publishOption>Slides</a:m_publishOption>
      <a:m_startSlide>0</a:m_startSlide>
    </Settings>
  </s:Header>
  <s:Body>
      <InputData>aaaaa…</InputData>
    </StreamConversionRequest>
  </s:Body>
</s:Envelope>
```

The protocol server responds with the following StreamConversionResponse message to the protocol client.

```
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
  <s:Header>
    <m_result>0</m_result>
  </s:Header>
  <s:Body>
      <m_outputData>bbbbb…</m_outputData>
    </StreamConversionResponse>
  </s:Body>
</s:Envelope>
```
5 Security

5.1 Security Considerations for Implementers
None.

5.2 Index of Security Parameters
None.
6 Appendix A: Full WSDL

For ease of implementation, the full WSDL is provided in this appendix.

```xml
<?xml version="1.0" encoding="UTF-8"?>
<wsdl:definitions xmlns:xs="http://www.w3.org/2001/XMLSchema"
    xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/"
    xmlns:tns="http://tempuri.org/"
    xmlns:wsaw="http://www.w3.org/2006/05/addressing/wsdl"
    targetNamespace="http://tempuri.org/">
    <wsdl:types>
        <xs:schema xmlns:tns4="http://tempuri.org/Imports"
            targetNamespace="http://tempuri.org/Imports">
            <xs:import namespace="http://schemas.microsoft.com/Message"/>
            <xs:import namespace="http://tempuri.org/"/>
        </xs:schema>
    </wsdl:types>
    <wsdl:portType name="IConversionService">
        <wsdl:operation name="Convert">
            <wsdl:input wsaw:Action="http://tempuri.org/IConversionService/Convert"
                name="StreamConversionRequest" message="tns:StreamConversionRequest"/>
                name="StreamConversionResponse" message="tns:StreamConversionResponse"/>
        </wsdl:operation>
    </wsdl:portType>
    <wsdl:binding name="DefaultBinding_IConversionService" type="tns:IConversionService">
        <soap:binding transport="http://schemas.xmlsoap.org/soap/http"/>
        <wsdl:operation name="Convert">
            <soap:operation soapAction="http://tempuri.org/IConversionService/Convert"
                style="document"/>
            <wsdl:input name="StreamConversionRequest">
                <soap:header message="tns:StreamConversionRequest_Headers" part="FileExtension"
                    use="literal"/>
                <soap:header message="tns:StreamConversionRequest_Headers" part="Format"
                    use="literal"/>
                <soap:header message="tns:StreamConversionRequest_Headers" part="Id"
                    use="literal"/>
                <soap:header message="tns:StreamConversionRequest_Headers" part="Settings"
                    use="literal"/>
            </wsdl:input>
            <wsdl:output name="StreamConversionResponse">
                <soap:header message="tns:StreamConversionResponse_Headers"
                    part="m_result" use="literal"/>
            </wsdl:output>
        </wsdl:operation>
    </wsdl:binding>
</wsdl:definitions>
```
</wsdl:message>
</wsdl:definitions>
7 Appendix B: Full XML Schema

<table>
<thead>
<tr>
<th>Schema name</th>
<th>Prefix</th>
<th>Section</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="http://schemas.microsoft.com/2003/10/Serialization/">http://schemas.microsoft.com/2003/10/Serialization/</a></td>

8 Appendix C: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include updates to those products.

- Microsoft SharePoint Server 2013
- Microsoft SharePoint Server 2016
- Microsoft SharePoint Server 2019

Exceptions, if any, are noted in this section. If an update version, service pack or Knowledge Base (KB) number appears with a product name, the behavior changed in that update. The new behavior also applies to subsequent updates unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms "SHOULD" or "SHOULD NOT" implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term "MAY" implies that the product does not follow the prescription.
9 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
